The Portal Project Teaching Dataset

It is an ecological experiment made in the Chihuahuan desert in Arizona near the city of Portal.

Later I will add a picture of the Chihuahuan desert <https://www.google.com/url?sa=i&url=https%3A%2F%2Fwww.desertusa.com%2Fchihuahuan-desert.html&psig=AOvVaw1ccqb81iiGHfvmvPe9xZXL&ust=1665611083984000&source=images&cd=vfe&ved=0CAwQjRxqFwoTCPj2uP2S2foCFQAAAAAdAAAAABAD>

For all the data manipulations we are going to be using the `dplyr` package.

To install packages we use the function `install_packages()`. But to use the functions inside a package, we need to load them to our environment, we do this with the function `library()`.

```
library(dplyr)

##
## Attaching package: 'dplyr'

## The following objects are masked from 'package:stats':
##
##   filter, lag

## The following objects are masked from 'package:base':
##
##   intersect, setdiff, setequal, union
```

Read the data table

```
getwd()

## [1] "/Users/lunasare/Desktop/data-science-course/fall-2022/documents"

surveys <- read.csv(file = "../data-raw/surveys.csv")
head(surveys)

Subset a data table by columns

Using the dplyr function `select()`:

```
select(surveys, year, species_id, weight)
```

```

Add columns to a data table

Let's say that we want to add an extra column that has weight divided by 10.

Using the classic approach

```
colnames(surveys)
```

```
## [1] "record_id"      "month"          "day"           "year"
## [5] "plot_id"        "species_id"     "sex"           "hindfoot_length"
## [9] "weight"
```

```
surveys$weight_decimal <- surveys$weight/10
```

```
colnames(surveys)
```

```
## [1] "record_id"      "month"          "day"           "year"
## [5] "plot_id"        "species_id"     "sex"           "hindfoot_length"
## [9] "weight"        "weight_decimal"
```

We can use the function `mutate()`

```
surveys <- mutate(surveys, weight_decimal_2 = weight/10)
```

```
surveys
```

```
##      record_id month day year plot_id species_id sex hindfoot_length weight
